Simple, Affordable, Powerful—A Complete Digital Image Acquisition and Management Solution

You’re eager for the workflow and productivity benefits of an all-inclusive, integrated digital imaging solution. But traditional CR / PACS bundles are too large, expensive and out of proportion for your needs. Meet CARESTREAM Image Suite - an affordable CR software package created specifically for private practices and smaller clinics. Think of it as a “mini-PACS” solution. It’s ideal for optimizing your workflow today, and scalable to meet your expanding needs tomorrow. Most importantly, it delivers high-quality images while streamlining your workflow including capturing, viewing, processing, printing and storing your images. All of this allows you to increase productivity and enhance patient care.

Advantages at a glance

- Streamlined workflow enables improved patient care
- Scalable design that can grow with your needs
- Fast, simple installation and user training
- EV-A (Enhanced Visualization-Automatic) image processing for high quality images
- Available with Carestream’s DirectView Classic and Point-of-Care CR systems
A Perfect Fit
Image Suite was designed to answer the unique image management needs of smaller facilities. It’s ideal for:
• Private practices and small offices with one to three physicians
• Orthopedic
• Podiatry
• Chiropractic
• General radiography
• Urgent care centers
• Occupational medicine
• Small clinics or single site offices with up to 12,000 exams per year

A Great Investment
Image Suite Software, combined with a DirectView Classic, or Point-of-Care CR reader, offers a low cost of entry and ownership when compared to traditional CR/PACS solutions. It’s a cost effective way to move to digital imaging where you can enhance your practice’s productivity and standard of care—by accelerating your workflow and providing more timely patient care decisions.

Smooth Integration
The Image Suite solution is exceptionally easy to implement and operate—so easy, that new users will be operating the system with confidence in one day or less, which translates into significant savings in time and training expense.

A Quality Product Designed To Fit Your Needs
Image Suite delivers high quality images that are automatically processed with high accuracy. Or, you can set preferred image processing settings as the default during your normal workflow, and still have the ability to adjust raw image data at the host workstation if needed.

Compatible Cost Saver
When it comes to integrating Image Suite into your practice or facility, you’ll find it can be hosted on a broad range of PC workstations, with either standard or high-resolution monitors. It can also be set up as either a single or dual monitor configuration.

Robust Workflow Solution
Image Suite is feature rich; a powerful image capture, viewing and storage solution. You’ll capture and manage images quickly, streamlining your processes and offering your patients shorter waiting times. It can support up to eight concurrent web viewer sessions. Moreover, because raw image data is available at the host workstation and EV-A image processing is integrated into the image viewer, you can always recover any marginally processed image. So you’ll experience optimal image presentation on any display monitor with no “failed processing” of images—again, saving time, reducing retakes, simplifying workflow, and increasing productivity.

A Growth Opportunity
With Image Suite, you pay only for the capabilities you need today—with no limitation on your practice’s potential for future growth. This software is designed to expand with your evolving requirements—flexible and scalable, you can easily add features and capabilities as your practice grows.

Image Suite allows you to interface with other modalities using DICOM Store as a Service Class Provider. And all Image Suite systems include a CD/DVD burning feature coupled with Single Media Archive, allowing you to build a patient image library where images can be stored and recalled easily and quickly.

Available Options Include:
• Report writing capability
• Long-Length Imaging Software
• Additional web viewer connections/sessions
• Mammography feature software for DirectView Classic Systems (not available in US)

An Easy Choice
Examine the options, and Image Suite emerges as the image acquisition and management solution of choice. Image Suite delivers the performance and capabilities to help your practice grow and succeed.

Product Specifications
Hardware Requirements
Hardware consists of one image capture device; Classic or Point-of Care, attached to a PC workstation with choice of monitors:
• Standard or high resolution monitor
• Single or dual monitor set-up

Minimum PC Requirements
• Windows XP SP3 professional 32 bit
• Intel Pentium 4 Processor @ 2.8GHz
• 2GB DRAM memory
• 80GB hard disk
• Ethernet card 100 Mbp/s
• CD/DVD writer
• 17” display of 1024x768 resolution
